## EXPERIENCE

### Persistent Systems, Goa, Remote

April 2018 - PRESENT

- Built multiple products for multiple clients in Angular and React.
- Led a team of 4 Front end developers to build 3 rich analytical features from scratch and received appreciation from the client's Director.
- Built an application that scans user's cloud accounts to identify problems with them according to GDPR and HIPAA standards.
- Built a rich Admin Portal from scratch to aid onboarding and customer tracking.
- Built an Application to direct the user to the nearby dispensary.
- Coordinated with the UX team and developed UI templates using web technologies like Flexbox, and Grids to develop a dashboard optimized even for Mobile devices.
- Coordinated with multiple remote teams spread across different time zones.
- Optimized existing code base to improve the performance and usability of the application.
- Committed the code to GitLab, GitHub daily
- Work includes – Sync with Product and API teams, Code review, Performance optimization & ensuring smooth releases.

### Techjini Solutions (DataMatics), Bangalore

July 2012 - March 2018

- Began my career by working in a startup company where I implemented multiple projects using Vanilla JavaScript and JavaScript-based frameworks like Angular JS.
- Developed a responsive web application using web technologies like HTML, CSS, and PHP to keep track of employees and the leaves taken by them.
- Collaborated with a large team to design a portal where the customers can view their advertisements, and manage, track, optimize, and measure campaigns across brands and received an award from the CTO for my work.
- Implemented the Front-end Web Design of the portal using

## SOME PROJECTS

### **Firewalker, LionLeaf— *Personal Dispensary Locator***

*Tools and Technologies used: React, NextJS*

Firewalker provides the public with easy directions to nearby dispensaries, highlights popular products, and recommends new trending items. Meanwhile, it also offers store owners insights into the latest trends and customer preferences, enabling them to make better decisions.

### **Remedy Engine, ClearData — *Cloud catalyst. Healthcare protector***

*Tools and Technologies used: Angular, Typescript, GraphQL, ChartJS, GoLang*

Remedy Engine offers one of the best solutions to the healthcare industry to protect their patient's information. By adopting modern cloud technologies, healthcare organizations can be sure that sensitive data is private, secure, and compliant.

### **Visto — *Digital Advertising Platform***

*Tools and Technologies used: Angular, Typescript, ChartJS*

Visto is a digital advertising platform used by Agencies and Media Companies. It provides a platform-agnostic ad hub with a single interface to manage, track, optimize and measure campaigns across brands, products, regions, and agencies and also provides reports.

### **Bumble Bee Seafoods — *Hero Of Color City***

*Tools and Technologies used: Vanilla JS, HTML, CSS*

This project was developed to promote the film named HOCC (Hero Of Color City). This is a web application through which kids can play a few games and adults can learn to prepare tasty recipes.

### **Boston Marathon World Run — *Virtual Marathon***

*Tools and Technologies used: Vanilla JS, HTML, CSS*

A virtual marathon to raise money for the victims of the 2014 Boston bombing. Here the participants can click and upload pictures of themselves and upload them to the site. Users can also view the pictures in the gallery.
